# MULTILINGUAL NEWS ARTICLE FRAMING CLASSIFIER

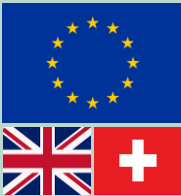

developed by The University of Sheffield

**AIM OF THE TOOL** This service identifies the main frames used in a particular article. It is a multilingual classifier capable of processing 104 languages, but it will perform the best on the six languages on which it was trained: English, French, German, Italian, Polish and Russian. The classifier recognizes 9 principal frames: (1) Economy and Resources, (2) Religious, Ethical and Cultural, (3) Fairness, Equality and Rights, (4) Law and Justice System, (5) Crime and Punishment, (6) Security, Defense and Well-being, (7) Health and Safety, (8) Politics, (9) International Relations.

**MORE INFORMATION**  
The tool is based on our submission to the [SemEval 2023 Task 3](#) and the [follow-up journal publication](#). Demo of the tool is provided as a part of [this EBU Webinar](#).

**ACCESS TO THE TOOL** The current version of the graphical user interface is accessible via [cloud.gate.ac.uk/shopfront/displayItem/news-framing-classifier](https://cloud.gate.ac.uk/shopfront/displayItem/news-framing-classifier)
